Expert
ecological
consultancy
and advisory
services

We work closely with our clients, providing ecological advice of the highest quality and delivering workable solutions based on best practice.

How we can help you

We can provide all the ecological expertise you require for impact assessments, site supervision, surveys, mitigation and monitoring.

Commitment to clients

- We understand your need for reliable and timely advice.
- We will use our professional experience and judgement to ensure that you receive the advice required to comply with conservation legislation.
- We are experienced in working together with clients during the planning and implementation of projects, and can provide creative and novel solutions to challenging problems.
- All our work is carried out in accordance with Institute for Ecology and Environmental Management guidelines for ecological impact assessment in the UK.

Our services

- Provision of site ecologists for large and small-scale developments.
- Ecological impact assessments.
 - Bird surveys.
 - Badger surveys, sett activity assessments, artificial sett construction and mitigation.
 - Bat licence applications, roost design and mitigation work.
 - Survey and management of dormice, otters, water voles, newts and crayfish.
 - Botanical surveys (Phase I, II and NVC).

Expertise to count on

Our staff are highly qualified and experienced professional ecologists. We are committed to providing a service of the highest quality to all our commercial and public sector clients.

Training services

Our partner company Biocensus Training runs courses on ecological management techniques, hosted by highly experienced tutors. See our website for further details.
